

# Sthuthi Poojary

Aspiring Machine Learning Engineer — Full Stack Developer

sthuthim870@gmail.com — +91-7795009031 — LinkedIn — Portfolio — GitHub

## Summary

Third-year AIML student with strong foundations in Data Structures and Machine Learning. Experienced in building real-time full-stack applications and data-driven systems, including federated learning and SaaS analytics pipelines. Passionate about solving real-world problems through scalable and intelligent systems.

## Technical Skills

- **Languages:** C++, Python, JavaScript, SQL
- **Frameworks:** React.js, Node.js, Express.js, Flask, FastAPI
- **Tools:** Git, Firebase, Docker, PostgreSQL, Power BI
- **Core:** Data Structures & Algorithms, Machine Learning, System Design

## Projects

|                                                                                                                                                                                                                                                                         |      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Smart Waste Collection Ecosystem</b>                                                                                                                                                                                                                                 | 2024 |
| <ul style="list-style-type: none"><li>• Built a React + Firebase system for real-time waste tracking with role-based access.</li><li>• Developed an admin dashboard for ward-level monitoring and reporting.</li></ul>                                                  |      |
| <b>Collaboard – Collaborative Task Manager</b>                                                                                                                                                                                                                          | 2025 |
| <ul style="list-style-type: none"><li>• Developed a real-time collaboration platform using WebSockets.</li><li>• Achieved sub-100ms synchronization for live updates.</li></ul>                                                                                         |      |
| <b>SaaS Pricing Intelligence Engine</b>                                                                                                                                                                                                                                 | 2025 |
| <ul style="list-style-type: none"><li>• Built a containerized pipeline using Python, PostgreSQL, and Docker.</li><li>• Implemented web scraping, NLP classification, and ML-based trend forecasting.</li><li>• Visualized insights using Power BI dashboards.</li></ul> |      |
| <b>Federated Learning for Skin Disease Detection</b>                                                                                                                                                                                                                    | 2025 |
| <ul style="list-style-type: none"><li>• Developing a privacy-preserving ML model for melanoma detection.</li><li>• Leveraging federated learning for decentralized training.</li></ul>                                                                                  |      |

## Experience

|                                                                                                                                                                                   |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Genesys Hackathon – PES College of Engineering</b>                                                                                                                             | 2024       |
| <ul style="list-style-type: none"><li>• Built a health transparency application within 24 hours in a team of 4.</li><li>• Contributed to UI/UX and backend integration.</li></ul> |            |
| <b>Smart India Hackathon (SIH)</b>                                                                                                                                                | 2024, 2025 |
| <ul style="list-style-type: none"><li>• Shortlisted among top 10 teams in internal rounds for two consecutive years.</li></ul>                                                    |            |
| <b>GirlScript Summer of Code</b>                                                                                                                                                  | 2025       |
| <ul style="list-style-type: none"><li>• Contributed to open-source projects with 5+ merged pull requests.</li></ul>                                                               |            |

## Education

|                                                               |                |
|---------------------------------------------------------------|----------------|
| <b>B.Tech in Artificial Intelligence and Machine Learning</b> | 2023 – Present |
| Sahyadri College of Engineering and Management                |                |
| <b>PCMB</b>                                                   | 2021 – 2023    |
| St. Aloysius Pre-University College                           |                |

## Leadership & Activities

- Organizer at SOSC – conducted workshops and coding events.
- Mentor at HackHarbour 3.0 – guided 100+ students.
- Hosted O(n)slaught – inter-college competitive programming contest.

## Additional

- **Software:** MS Office, Adobe Photoshop
- **Interests:** Blogging, Fitness, Dancing, Cooking
